- BROWN
- ANTHRACITE
- GREY
- SAND GREY
- WHITE
- LIGHT GREY

POLAR ICE	LATTE	CREME BRULEE	GINGERBREAD
TRADITIONAL	BARNYARD	CABERNET	NEW ENGLAND
BURNT TIMBER	CAMPFIRE	SANDSTORM	WILD ROSE
MIDNIGHT	ARCTIC	BATTLESHIP	RUNDLE
Working with TechBrick & Adhesives

1 Bonding:
With the help of a notched trowel (4mm) spread special Elastolith adhesive on an area of approximately 1sq.metre. Do not spread on wider area, due to the fast drying rate of the adhesive. Thickness of the layer should be around 2 mm. It is recommended to start from the top of the wall and work your way to the bottom.

2 Pressing:
Press the flexible Elastolith brick slip to the freshly applied adhesive and leave 12-14mm space between the brick slips. You must carefully press over its entire surface to the adhesive immediately after the application.

3 Grouting:
After pressing the flexible brick slips the fresh excess adhesive must be removed by using a brush (12mm wide). It is very important to pay attention to the execution of sealing the joints to block the access of the water between the brick slips and the adhesive. It is very important to cover the edges of the brick slips, they must be fully coated with the adhesive.
